

AODE, 4R70W & 4R75E/W

Ford 4-Speed Transmission

LIKE NEW - ONLY BETTER

These are only a few updates and upgrades we make to our AODE, 4R70W & 4R75E/W transmissions.

Six-plate direct clutch and four-plate intermediate clutch packs, standard on all models, increase durability and performance.

Updated EPC solenoid and solenoid clips.

New boost valve kit, pressure regulator valve, bypass converter clutch sleeve, and plunger eliminate delayed engagement, shudder, and soft shifting.

Upgraded spiral lock snap ring and staked retainer for intermediate clutch address an OE design flaw and eliminate premature failure.

Updated 1-2 and 2-3 accumulator pistons prevent harsh shifting and premature clutch failure.

New overdrive servo pin sleeve installed in our servo modification process with custom-designed tooling and bushings.

Completely remanufactured pump with new line bore bushings eliminates leaks and provides superior flow and durability.

Fully remanufactured torque converter is tested for leaks, lockup, concentricity, and balance. Upgrades exceed OE requirements and eliminate the possibility of front seal leaks, premature bushing wear, and vibration.

New ETE-spec bushings improve internal fluid flow control and pressures.

2001 and newer models feature a new 3-4 capacity valve sleeve and an extra-thick zinc-coated *Super Tough Plate* to eliminate plate cracking and cross leaks caused by repeated stress from the 2-3 accumulator piston spring retainer.

Police, towing, and performance packages include: eight-plate direct clutch pack, additional valve body modifications, elevated pressure regulator valve, and other upgrades to increase durability and load capacity.

Complete road simulation testing using ETE's very own dynamometer testing program called CARS (Computer-Aided Road Simulation). Every transmission is cold- and hot-tested while using ETE's fully SynthETec™ transmission fluid and filtration system.
