

A618

Chrysler 4-Speed Transmission

LIKE NEW - ONLY BETTER

These are only a few standard updates and upgrades we make to our A618 (47RH/47RE/48RE) transmissions.

Fully remanufactured torque converter is tested for leaks, lockup, concentricity, and balance. Upgrades, including billet converter cover with machined mounting pads, surpass OE requirements, thereby eliminating the possibility of front seal leaks, premature bushing wear, and vibration. Diesel and heavy-duty gasoline applications equipped with new heavy-duty lock-up lining.

Fully remanufactured valve body includes updated throttle valve, manual valve, 4-spool switch valve, and pressure regulator valve for improved shifting, lubrication, and performance.

Valve body is modified to allow torque converter charge in park to increase durability and enhance gear engagements.

Completely remanufactured pump provides consistent internal pressures, eliminating slipping and delayed engagement.

High/Reverse clutch updated to four plates for both gas and diesel applications.

Overdrive (OD) direct clutch updated to 10-plate clutch for increased durability.
Overdrive (OD) direct clutch updated thrust plate.

Overdrive (OD) planetary assembly upgraded to 5-pinion unit for increased durability.

Overdrive (OD) clutch updated to 4-plate clutch for gas applications and 5-plate clutch for diesel applications.

Oversize Low/Reverse brake band strut installed to maintain correct band clearance for elimination of drum slippage and "no-reverse" condition.

ETE-spec bushings installed as needed to improve internal fluid flow control and pressures.

Bushings and machined surfaces polished to mirror-like OE finish of 16 RA or less.

Complete road simulation testing using ETE's very own dynamometer testing program called CARS (Computer-Aided Road Simulation). Every transmission is cold- and hot-tested using ETE's fully SynthETEC™ transmission fluid and advanced filtration system.

ETE provides new external fluid cooler to ensure sufficient transmission cooling and to eliminate potential contamination sources from previous failed unit.
